

4315 - 1 M Telescope Polished Brass

4315A - 1 M Telescope Antique Finish

This product is exactly as described by the heading. It is a solid brass telescope with a metre long barrel. Its other unique features are that the barrel diameter is extra wide to allow more light in. The lenses used in the telescope are coated achromatic lenses. In common man's language, this means that the image is sharp around the edges of the lens with minimal distortion. The telescope is mounted on a telescopic timber stand that is made of seeshum timber. Seeshum is Himalayan hardwood that is moisture controlled & highly recommended for structural purposes. Hence it is ideal for making a stand for this telescope. This telescope is ideally used while standing up. It combines aesthetics with practicality. A modern home overlooking the ocean would be ideal for this product. After you have finished looking at the boats in the distance or at your friends on the beach, you can leave it standing in the room - instead of having to fold it away. This product is a decorator's delight. Its true place is in the main lounge, where every one can admire it or use it if so desired.

It is available in two finishes. Polished brass & Antique Finish.

Minimum Purchase – 1 Pc
 Size – Barrel length – 1 M
 Barrel dia – 5.7cm (2.25")

Focus Mechanism
by finger twist control

Eye Piece for
viewing

Shade in front prevents glare
& protects the front element.

Hand Held Telescopes

Our Range of hand held telescopes are a smart choice for quick viewing of distant objects. These telescopes are functional & made of brass. They are at surprisingly good prices to attract impulse buying. We offer them in three sizes & a choice of two finishes in every size. Every telescope is offered with a timber presentation box with heavy brass embellishments. Our products are designed to impress the gentleman you purchase them for. These 6" telescopes in a presentation box are excellent value. They are primarily focused (no pun intended) at the gift presentation market. However they provide limited functionality. We recommend one of the larger models if a higher magnification is desired.
